The BLACKLIGHT EDITION from Cordial combines the usual outstanding inner values with a UV-reactive textile jacket that is particularly eye-catching in black light. Individual threads of UV-reactive material have been woven into the textile jacket for this purpose. In clubs or on stages, these fibres make the cables glow green or orange under black light. This makes for real eye-catchers in your stage arrangement.

The conductor area of the bulk cable is 0.50 mm² (AWG 21), twice as high as that of conventional woven cables. To minimise microphonic effects and to protect against external interference, it is double-shielded with a braid of bare copper wires on conductive plastic.
