It is the ideal loudspeaker for background music and spoken message distribution. CM6TSMF has a very good speech intelligibility factor and a surprisingly wide dispersion at the typical speech frequencies, what makes it your number one choice for vocal announcements, evacuation systems...

Thanks to the back can of the loudspeaker, ideal and constant sound is guaranteed. In perforated ceilings, you will not have an acoustic short circuit when installing CM6TSMF as the back can of the loudspeaker prevents this to happen. Another advantage of the back can is that people working or living on the floor above will not hear the music that is playing.

Possible applications for CM6TSMF could be hallways, boutiques and shops, board rooms and offices, emergency and evacuation systems.
