

CHORD Clearway Speaker Cable 50

Šifra: 13728
Kategorija proizvoda: Hi-Fi kablovi na metar
Proizvođač: CHORD

Cena: 1.530,00 rsd

Clearway uses 14 AWG multi-strand oxygen free copper conductors – big enough to bring control and definition to both book shelf and floor standing loud speakers. The insulation is FEP which has a very similar performance to PTFE. The choice of insulation has a profound effect on the ultimate performance of a speaker cable and FEP contributes to the neutrality of the Clearway speaker cable. Other types of insulation will often produce unwanted tonal colourations and while your music should be full of colour your cables shouldn't. The conductors are arranged in a twisted pair configuration before a soft PVC internal jacket is applied, this helps to minimise mechanical noise and also spaces the twin contra-wound foil shields in relation to the conductors.

Shielding a speaker cable brings subtle nuances that make music come alive. Clearway can transform the performance of your system particularly when it comes to coherence and timing. It will let you further into your favourite music.

Available in terminated pairs and off the reel per metre. Most of our dealers have demonstration sets available, it will cost you nothing but your time to listen, and for a music lover you'll hear its worth in the first few bars of music.

Technical Specifications

Conductor	High purity OFC
Insulation	FEP
Configuration	Twisted pair
Shielding	Dual high density foil. Translucent PVC outer jacket
AWG	14
mm2	2.08
Diameter	10.5mm
