Sennheiser EW IEM G4

The

Monitoring Set

The set consists of an EK IEM G4 stereo receiver, IE 4 in-ear headphones and an SR IEM G4 stereo transmission device with an OLED display.

It is a robust all-in-one wireless monitoring system for in-ear applications and has

been specially developed for high-quality live sound with a bandwidth of up to 42 MHz with 16 compatible channels and 1680 selectable frequencies in the UHF range

Wireless microphones have never been easier and more flexible

The G4 from Sennheiser is the fourth generation of the bellieben Sennheiser evolution wireless series and is ideal for applications such as touring, outdoor shooting, in conference rooms or lecture halls. With the G4 100 series, 12 channels can now be synchronized within seconds. This feature saves valuable time when setting up. The 300 and 500 G4 series come with a high bandwidth of up to 88 MHz. The display is the heart of the system, from which all relevant settings can be made. The Wireless Systems Manager software is for the 300 Series and 500 Series that Control Cockpit is for the 300 Series. These software variants make monitoring multi-channel systems extremely simple and ensure a perfect workflow.

The transmission reliability of Sennheiser G4 systems is very high

The Sennheiser 300 and 500 G4 has a perfect sound even at a distance of 100 meters, which is also due to the transmission power of up to 50 mW. For this purpose, feedback-proof microphone capsules have been installed in the microphones; this interaction ensures transmission reliability right down to the last row of a room. Especially where everything has to be in one take, for example during outside shoots, surrounded by many other camera teams, G4 shows its full potential.

The Sennheiser Evolution wireless G4 is made for all stages, small and large, indoors and outdoors

That's why musicians and professional sound designers alike are enthusiastic about Sennheiser's most flexible live system.

Features:

Manufacturer: Sennheiser
Frequency Band: UHF
Frequency Response from (Hz): 25
Frequency Response to (Hz): 15000
Frequency scan: Yes
inEar model: IE 4
Color of in Ear piece: Black
