Cena: 68.280,00 rsd

Q Acoustics B12 Subwoofer Arctic White - Aktivni vufer

"If you love the sound of Q Acoustics' speaker packages but covet more power, the QB12 is as good a solution as we could hope for."

Q Acoustics Q B12

Wattage: 220 (RMS)

Driver Size: 12"

Direction: Front-Firing

What We Like: Clean and powerful bass matched with clever controls.

What We Don't: Lacks the ability to deliver huge, gut-punching bass.

It's hard not to be wowed by the bass that comes out of the Q Acoustics Q B12. This subwoofer offers a polished sound that feels clean and elegant, while still delivering good levels of power. Despite having less than half the wattage of our former number one, the \$800 ELAC Debut 2.0 SUB3030, the more affordable Q B12 sub genuinely impressed us with its outstanding and surprisingly subtle audio quality. We also found it a dream to use thanks to the intelligent rear-mounted controls. There's even a magnetic metal plate that allows you to hide any connecting wires, while still letting you use the crossover and volume dials.

There's one note of caution here, and it's the power. 220 watts is nothing to sniff at, but compared to other subwoofers here, the Q B12 may come across as being a little underpowered. It delivers smooth, confident bass, but it doesn't have the raw, stomach-pounding energy of subwoofers like \$999 SVS SB-3000 or the aforementioned ELAC. If that's your jam, then you may want to check out those models, and steer clear of the Q. It's also huge: nearly twenty inches wide, and amazingly heavy at almost fifty pounds. That said, in our opinion this is a gem of a sub that offers stupendous sound at an affordable price. Hands down, this is our favorite subwoofer right now.

The largest and most powerful subwoofer from Q Acoustics so far, with the amplifier's proprietary PurePath Ultra-HD technology ensuring unwanted distortion is minimised across the board, resulting in a taut but forceful sound.

The Q B12 boasts a long-throw 12-inch driver with high sensitivity and superb dynamics, powered by an ultra-low distortion 220W Texas Instruments TPA3255 Class D amplifier. Q B12 has a 'dart brace' internal

design inside the subwoofer's reinforced MDF cabinet with a 36mm baffle, providing superior mechanical stability to the driver and the reinforced rigidity reduces resonance and vibrations for an improved accurate bass response

Punchy & Powerful

Image not found or type unknown

Punchy & Powerful

The Q B12 Subwoofer has been specifically designed to deliver the ultimate cinematic highs and lows, all the floor-shaking bass you would expect from a plus-sized Subwoofer from Q Acoustics. Despite its magnificent size, it is precise, detailed and dynamic. With the integration of internal 'Dart bracing' providing additional cabinet rigidity and a reinforced MDF cabinet with a 36mm thick baffle, both work together to suppress cabinet resonance for a more controlled bass response and a more realistic cinematic experience.

Designed To Integrate

Designed To Integrate

The Q B12 has been designed to fit seamlessly within one of Q Acoustics multi-award winning home cinema packs including the Q Concept 5.1, Q

3050i 5.1 and the Q 3010i 5.1 available in a black and white, both vinyl and gloss, for the perfect match. Each has its merits with regards to the sound and setup and each can be sonically enhanced and upgraded creating a truly 'Plus-Size' cinema package with the addition of this 12inch subwoofer. The Q B12 is also perfect for those aiming to upgrade the low-end response in an existing home set-up.

Seamless Setup

Seamless Setup

With its recessed and hidden rear terminal panel, hiding all plugs and cables neatly out through the base of the subwoofer, the Q B12 can be easily and discreetly positioned. Custom designed, adjustable spiked feet give firm support on carpeted floor and reinforced rubber caps supplied for use with wooden floors ensuring integral stability for your subwoofer.

Enclosure Type	Infinite Baffle (sealed)
Enclosure Material	MDF

Drive Units	12" (305mm) High-Excursion
Continuous Amplifier Power	220W
Peak Amplifier Power	440W
Frequency Range	28Hz - 300Hz
Overall Dimensions	400 x 400 x 446mm (H x W x D) without spikes
Weight	18.5 kg
Mains Power	100 V-240 V, 50/60 Hz
Input impedance	13 kΩ
Input sensitivity (for full power at 50Hz, level set to maximum)	150 mV, (L=R), 300mV, (L only)
Input sensitivity for auto switch-on	1.5 mV (L=R), 3 mV (L only)
Crossover frequency range	70 Hz - 225 Hz (12dB/octave)
