Cena: 29.880,00 rsd

BOUNDARY MICROPHONE

The Classis BM 52 boundary microphone combines a number of different functions in a small, discreet housing. Depending on the application there are three operating modes you can select: ON-OFF, Push-To-Talk and Push-To-Mute. Furthermore, the frequency response can be set in three stages: linear or a two-stage roll-off filter to compensate low-frequency noise.

SCUDIO TECHNOLOGY

The Scudio technology includes many electronical and mechanical measurements to eliminate unwanted interferences from mobile phones. The patented shielding of the capsule is an important detail of all microphones. The interaction of all Scudio features ensures the optimal sound quality and intelligibility of speech of the beyerdynamic Classis BM 52.

OPERATION

The Classis BM 52 is operated via a silent membrane key with Braille and a super bright LED displays the ready-to-speak status. The robust housing with a high-quality design is covered with a very exclusive, dust repellent fabric. Due to its matt, non-glare surface, the Classis BM 52 can discretely be integrated into each installation. It has all possibilities of an intelligent desktop microphone unit. It can be used anywhere, where little space is available, but a high functionality is required. It is ideal for discussions or tele/video conferencing.

MADE IN GERMANY

The Classis BM 52 is carefully handcrafted at our headquarter in Heilbronn, Germany. We manufacture using only the finest mechanical and electronic components and rock solid materials.
