

## ASTON MICROPHONES Halo Shadow

### ASTON MICROPHONES Halo Shadow

Hi

Tech construction with patented PET felt

Šifra:

Kategorija proizvoda: Pop Filteri i Reflection Filteri

Proizvođač: ASTON MICROPHONES

The Halo is made from a patented PET felt which is one of the most lightweight and efficient, technical acoustic products available on the global market today, making it ideal for use in a reflection filter.

**Cena: 46.500,00 rsd**

An additional side benefit is that the acoustic felt

which makes up most of the sound absorption field is made from 70% recycled PET plastic, so this highly technical product is also very environmentally friendly.

The lightweight material design, coupled with beautifully engineered 'easy-mount' hardware, means the Halo is quick and easy to set up, stable on mic stands, and sounds and looks fantastic.

Enhanced performance

Halo's unique design is much bigger than other portable booths, and wraps around top and bottom to a maximum rear depth of almost 100mm to improve room isolation and absorption without dominating the room sound. Its textured and wave-formed surface also helps diffuse direct sound.

Our market research also revealed that many people have a hard time with getting a good performance when using other reflection filters because they are not very 'creative-friendly' environments. The Halo's form, colour options and size is designed to create a more 'organic-feeling' space for the performer to work with.

The combination of radically improved performance in almost every area of currently available technology, while paying special attention to both the green credentials of our manufacturing and to the creative element that the artist requires in their performance environment to get the best from every take, makes the very best possible solution for portable room acoustics available today.
