

## WHARFEDALE Diamond 12.4 Light Oak Podnostojeći Zvučnik

Šifra: 15586

Kategorija prozivoda: Podnostojeći Zvučnici

Proizvođač: Wharfedale

**Cena: 53.880,00 rsd**

### WHARFEDALE Diamond 12.4 Light Oak Podnostojeći Zvučnik

Since 1982, Wharfedale's famous Diamond speakers have served as the classic entry point to true high-fidelity sound, their exceptional sonic value for money earning numerous 'product of the year' accolades in the UK and around the world. This autumn, with the introduction of the all-new Diamond 12 Series, Wharfedale once again raises the bar for affordable, high-performance loudspeakers.

To develop the new range, Wharfedale has collaborated with world-renowned speaker designer Karl-Heinz Fink for the first time. Fink's track record of delivering class-leading sound from modestly priced speakers is exceptional and with the Diamond 12 Series, he and Wharfedale's team of acoustic engineers have achieved a new entry-level benchmark.

Wharfedale determined that the Diamond 12 Series should be an opportunity to start afresh. A challenge was issued to Mr Fink: how much sonic performance can you wring from a range of speakers at classic Diamond price points? And so, he and Wharfedale's team set to work, delivering clean-sheet designs without a single part unaltered from the outgoing - and more costly - Diamond 11 Series.

**Klarity**  
- The  
Difference  
is Clear

Since  
the  
Diamond  
8 Series  
in 2001,  
Wharfedale  
has  
made  
the  
mid/bass  
cones  
for every

Diamond  
generation  
from  
Kevlar.  
19 years  
and  
many  
award-  
wining  
ranges  
later,  
Wharfedale  
has  
developed  
a new  
composite  
called  
Klarity™.

The  
chief  
ingredient  
of  
Klarity™  
is  
polypropylene,  
a  
material  
that has  
been  
used to  
make  
speaker  
cones  
since  
the BBC  
researched  
its use  
for this  
purpose  
in the  
1970s.

Polypropylene  
cones  
are  
renowned  
for their  
characteristically  
low  
distortion  
and  
controlled  
'breakup',  
as well  
as their  
resistance  
to  
moisture  
in the  
air. They  
also  
have a

reputation  
in some  
quarters  
for  
sounding  
a little  
'unexciting'  
- a  
perception  
that is  
largely **Bass/Mid**  
the **Drivers**  
result of **- Cone**  
mediocre **Surround,**  
engineering **Magnet**  
When **and**  
designed **Voice**  
and **Coil**  
implemented  
optimally,  
polypropylene  
cones In the  
can past,  
sound polypropylene  
enthralling cones  
have  
often  
been  
combined  
with  
high-  
damping  
surrounds  
to  
achieve  
a  
smooth  
response  
curve.  
However,  
the  
hysteresis  
of these  
surrounds  
can  
restrict  
dynamics  
and  
make  
bass  
sound a  
little  
'soft'.  
For the  
Diamond  
12  
Series,  
the aim  
was to  
combine  
the

Klarity™  
cone  
with a  
low-  
damping  
surround,  
thereby  
achieving  
both low  
colouration  
and  
expressive  
dynamics.

This was  
not a  
simple  
task but,  
by  
simulating  
many  
different  
cone  
shapes  
and  
adding  
ribs to  
provide  
further  
stiffening,  
a flat  
response  
curve  
was  
achieved  
without  
resorting  
to a  
high-  
damping  
surround,  
thereby  
striking  
the ideal  
balance.

The  
Klarity™  
diaphragms  
are  
driven  
by a  
substantial,  
precision-  
made  
magnet  
system  
with an  
aluminium  
compensation  
ring to  
minimise  
the

effect of variations in inductance as the voice coil travels. This contributes to an absence of distortion and intermodulation generated by the motor system. The voice coil is wound on a high-power epoxy/glass fibre bobbin - highly unusual in speakers at this price level. This has the advantage of not adding eddy currents and delivering greater power handling than an aluminium bobbin, whilst also being much stiffer than the Kapton type.

The **Treble Unit and Crossover** and 12 Series' treble unit sports a 25mm dome made from a woven polyester film with a high-loss coating to deliver open and smoothly extended high frequencies. The magnet system and the front plate have been optimised for wide dispersion and uncompressed behaviour. The front plate is flat and exposes

The Diamond 12 sports a 25mm dome made from a woven polyester film with a high-loss coating to deliver open and smoothly extended high frequencies. The magnet system and the front plate have been optimised for wide dispersion and uncompressed behaviour. The front plate is flat and exposes

the dome as much as possible, with a short duct to balance the acoustic load and improve the SPL (sound pressure level) measurement.

The treble unit combines seamlessly with the mid/bass driver via a crossover network using an acoustic LKR 24dB topology.

This includes air core inductors of the type more commonly found in high-end speakers, selected because they produce the lowest distortion of all inductor types.

As the resistance of the coil is higher than a standard

laminated  
steel or  
ferrite  
core  
inductor,  
the  
magnetic  
structure  
of the  
mid/bass  
driver  
has  
been  
modified  
to  
compensate  
the  
resulting cabinet  
in fast, is a  
clean critical  
bass part of  
with no any  
distortion high-  
from the performance  
inductor. loudspeaker.  
At entry-  
level  
price  
points,  
corners  
are  
often cut  
to  
constrain  
cost, but  
this is a  
mistake;  
no  
matter  
how  
good the  
drive  
units,  
their  
performance  
will be  
wasted if  
the  
cabinet's  
construction  
is  
suboptimal.  
For this  
reason,  
Diamond  
12  
Series  
speakers  
feature  
cabinets  
constructed  
with a

**Cabinet  
Construction**

level of sophistication usually reserved for much more expensive designs.

The rear-ported enclosure of each model is precisely sized so that the internal volume works in harmony with the drive unit system to deliver the desired sonic result.

The cabinet walls are made from sections of wood fibre board of varying thickness, constructed in such a way as to subdue the identifiable characteristics of the cabinet's 'sound' and ensure the drivers' output remains unsullied. The

resonant properties of each element - even the glue - were considered to determine the ideal combination of materials and placement.

Inside the cabinet, Intelligent

Spot

Bracing connects opposing walls with a specific form of wood brace to achieve optimal reduction of cabinet resonance.

These braces are precisely modelled by computer simulation to improve upon the commonplace 'figure of eight' brace, which can have the effect of transferring resonance from one wall to another.

<b>Speaker type</b>	2.5-way floorstand
<b>Enclosure type</b>	Bass reflex
<b>Treble driver</b>	25mm textile dome
<b>Mid/bass driver</b>	150mm Klarity™ cone
<b>Dedicated bass driver</b>	150mm Klarity™ cone
<b>Sensitivity (2.83v @ 1m)</b>	89dB
<b>Recommended amp power</b>	30-200W
<b>Peak SPL</b>	102dB
<b>Nominal impedance</b>	8Ω compatible
<b>Minimum impedance</b>	5Ω
