

Avantone Pro AV10-MLF - Zvučnik

Šifra: 15788
Kategorija proizvoda: 10 Inča
Proizvođač: Avantone Pro

Cena: **17.880,00** rsd

Black box. White cone. High-range frequency. It's not known as the world's best — it's known for being the world's best reference — the sound that creates hits.

Replacement Woofer for CLA-10 / NS-10M

The Low Frequency driver, AV10 MLF, is a near exact match from 20Hz to the crossover frequency. We have changed the cone design from a lapped seam to a single continuous press formed cone from the same supplier as the original. This allows a much higher level of quality control and consistency during the manufacturing process.

The AV10 MLF replacement driver is physically and dimensionally exactly the same as the original and is a "bolt in" hassle free install that requires no changes to the cabinet in the installation process.

THE CLA MONITOR FAMILY — ONLY FROM AVANTONE

We've worked tirelessly to bring this classic monitor system back to the world — but it took more than just recreating a single speaker. A tremendous amount of attention has been put into every detail: matching the original MDF and wood veneer for the cabinet, matching the original winding dimensions/value/dc resistance of the inductors, profiling the most popular amplifier pairings of the original, just to name a few things. All of this development has culminated into a slew of monitor solutions.

The CLA-10 and CLA-10A: the iconic "white cone" monitors, in both passive and active configurations.

The CLA-100 and CLA-200: reference amplifiers with the perfect voicing to compliment the CLA-10 and original "white cones."

AV10 MHF and AV10 MLF: the classic "white cone" drivers — now available for the first time in decades as direct replacements for the original.

AV10 MXO: replacement crossover for original Yamaha™ NS10M™ studio monitors.
