

DEFINITIVE TECHNOLOGY DN8 White Aktivni vufer

Šifra: 16445
Kategorija proizvoda: Hi-Fi Subwooferi
Proizvođač: Definitive Technology

Cena: 59.880,00 rsd

Play Unmute
3XR™ Architecture
More Bass from
the Same Space

Descend's unique 3XR Architecture provides triple the bass-producing surface area of a traditional ported subwoofer. This extra surface area moves more air, resulting in massive low end. And because 3XR doesn't use ports, it also provides crystal-clear sound with no port noise distortion.

3XR Architecture
Powerful Amplification
Control & Custom...

Passive Radiators
for louder, lower,
cleaner bass

As the core technology behind Descend's 3XR Architecture, its passive bass radiators enable the DN8 to play as loud and low as a 10" ported sub without unwanted port noise distortion. Passive radiators also deliver a smooth frequency response like a sealed sub, but with the port-like ability to play louder and lower in a smaller enclosure.

What you get is the best of both worlds: louder, clearer bass than a ported sub from a smaller enclosure than a sealed sub.

3XR Architecture™
for as much bass as a
ported 10" subwoofer
Learn how it works

Powerful Amplification
Maximum
Impact

The DN8 is equipped with a 500-watt peak custom Class D digital amplifier, designed to get the most out of the DN8's 3XR Architecture. This custom amplification provides the Descend DN8 enough power and efficiency to play as low as 35Hz from a one-foot wide box.

DEFINITIVE TECHNOLOGY DN8 White Aktivni vufer

unique 3XR Architecture™ means it performs louder and clearer than other 8" subwoofers.

Fits Anywhere
Just over one foot wide

Loud & Clear
Unique 3XR Architecture

More Bass
Like a 10" subwoofer in an 8" sub cabinet

Custom Class D Digital Amplification
for immediate impact
Because the DN8 Class D amplifier is so efficient, little power is wasted as heat, and its entire output is dedicated to providing significantly smoother bass and greater impact. This allows the DN8 subwoofer to blend naturally into any audio system while producing greater volume and impact than competitive designs.

Control & Customization
Plays Well With
Others
You can customize the DN8 to the needs of your application, system and space. The DN8 features built-in controls for variable volume, low pass filter and phase (0/180°) for optimum bass levels and the ability to customize it to the specific needs of your system.

Back Panel Controls
for optimized bass levels
Manually adjust DN8’s variable volume, low pass filter, and phase so it always sounds perfect within your system.

Variable Volume Low Pass Filter Phase

Variable Volume
Adjust the volume level of your subwoofer to ensure perfectly proportioned bass for your audio system and your room.

One, two, or four subs
for smoother bass
throughout the room
While a single subwoofer can add bass and enhanced realism to any system, it may not provide consistent frequency response throughout the room.

When two or more subwoofers are properly employed throughout the room, sound waves disperse more evenly, flattening the frequency response. The result is smoother bass throughout the room, helping to eliminate boomy locations or dead spots.

One subwoofer for increased bass performance

Two subwoofers for improved bass impact

Four subwoofers for thunderous bass impact
