**Tuning Machines:** Eko Special Ukubass  
**Electronics:** Eko UK-300 (piezo)  
**Electronic Controls:** Volume, Eq (three bands), Display Tuner  
**Case:** Not Included

DUO UKUBASS is the electrified bass ukulele from "Duo" Series by Eko Guitars. It is made with a Mahogany top, sides and back, Okumé neck and South American Roupana fretless fingerboard with markings. With a 45 mm width at the nut and 512 mm scale length, it comes in an open pore satin finish. It is amplified with an Eko UK-300 (piezo electric) system that includes volume controls, three-band eq and display tuner. A very fun instrument, practical, light and performing when amplified, suitable for the beginner as well as the professional.

After the Guitalele, the Ukubass, the fusion of a bass and a ukulele, could not be missing. Thanks to its highly elastic polyurethane and silicone strings, the Ukubass is tuned like a traditional bass (EADG) while maintaining the same octave. Thanks to its fretless keyboard with fret markers, it is perfect both for those who already play and for introducing young children to music. The Ukubass is equipped with a preamplifier with integrated tuner, low battery level LED, volume, treble, midrange and bass. Seeking to expand the offer of musical instruments as much as possible, Eko Guitars proposes a section dedicated to the world of the Ukulele, an instrument commonly associated with Hawaii that provides the listener with a feeling of relaxation and well-being.
