Custom Sym-X™ Horn

### Allows for total efficiency from the HF transducer minimizing distortion and increasing output

Creates a perfectly symmetrical, flat response at the crossover point for exceptionally smooth midrange  
The horn-loading frequency is set below the HF drivers' LF capability allowing for maximum efficiency and optimal performance at the crossover point  
Coverage: 90° horizontal x 60° vertical  
Transparent System Limiting and Protection

### Dedicated processing module monitors and protects the amplifier in real time

Sound quality and tonal balance is maintained even under heavy limiting  
Utilizing powerful multi-band compression, the amplifier can target specific frequency ranges to prevent the system from being overloaded rather than turn everything down at the expense of overall output  
Input limiting keeps your source signal in check so if you're sending audio that's a bit too hot, the speaker will cool it down  
Universal Power Supply (100-240VAC) with Power Factor Correction for stable operation even with unstable AC power
