Each Nd3 is meticulously hand-made by our highly skilled technicians. The stylus profile is a high quality elliptical profile manmade polycrystalline diamond, which is bonded to a round titanium shank. The design uses brand new generator geometry with perfect symmetry to achieve accurate channel balance. The Nd3 also has an optimised pole gap for superior linearity and cross talk characteristics, this provides a far wider soundstage than the previous models. This new cartridge is created with miniaturised parallel coils which are wound in house utilising 38-micron wire with just 1275 turns. This produces a low inductance, low impedance generator giving vastly improved high frequency response. In keeping with our commitment to sustainability, the Nd range is supplied in 100% recyclable packaging.
