

DENON AH-D7200 WOOD

Šifra: 11887

Kategorija proizvoda: Over-Ear Slušalice

Proizvođač: DENON

Cena: **81.480,00 rsd.**

AH-D7200 is Denon's new reference headphone, drawing on more than 50 years' experience in headphone design and development. Over five decades we have refined our expertise in making fine-sounding headphones so comfortable you'll just want to keep on listening. These premium headphones use our unique, Japanese-made FreeEdge drivers, which deliver a precise pistonic motion for ultra-accurate sound with minimal distortion. The drivers are mounted on vibration-reducing engineering resin baffles, fitted into self-damping real walnut housings designed to bring warmth and life to the sound.

A detachable 7N-purity copper cable, made in Japan to Denon's exacting specification, ensures the best possible signal transmission - it's fitted with a durable machine-cut metal plug with an ornamental copper ring. The ear cups are suspended on a headband finished in real sheepskin leather, with ergonomically curved die cast aluminium hangers, while the memory foam ear-cushions are covered with an extremely soft artificial leather developed specifically for the AH-D7200. Every part of this no-compromise design is all about sound quality, comfort - and the ultimate listening experience.

Wearing Comfort

The headband deploys perfectly ergonomically contoured die-cast aluminium construction for optimised comfort and fit. The ear-pads are gently wrapped in an extremely soft engineered leather developed specifically for the AH-D7200, and memory foam, allowing them to conform to the shape of your head for the most comfortable fit. Every

component of this compromise free design is all about sound quality and comfort - the ultimate listening experience.

Unique FreeEdge Driver

At the heart of the AH-D7200 is that 50mm FreeEdge driver diaphragm, made from a nano-fibre material chosen for its rigidity and low mass. This delivers an accurate pistonic motion without distortion, and is also self-damping to cancel out unwanted resonances within the diaphragm. It's mounted in a soft, compliant surround, making it easier for it to move in response to the music signal without flexing or distorting, for the purest possible sound.

Real Wood Ear cups

The beautiful 100% natural walnut ear cups enhance the sound experience. They are self-damping and strong, eliminating unwanted vibrations for super-detailed reproduction that brings concert hall-like life, warmth, and musicality to your listening experience.

Perfect Adjustment

To accommodate varied head-sizes, the adjustable headband uses positive ball-bearing click-stops for precise and repeatable adjustment. Numbered markings indicate how to restore your personal setting quickly and precisely.

High Quality Connection

A detachable 7N-purity copper cable, made in Japan to Denon's exacting specification, ensure the best possible signal transmission - it's fitted with a durable machine-cut metal plug with an ornamental copper ring.

Luxurious Craftmanship

The outside of the headband is adorned with natural sheepskin leather for a soft luxurious feel, while the inside uses stitched engineered leather for ultimate

comfort and durability.
