

## DENON DP 300F Premium Silver

Šifra: 10452

Kategorija proizvoda: Gramofoni

Proizvođač: DENON

Cena: **47.880,00** rsd.

ONKYO P-N855 B Image not found. Type unknown

Denon's DP-300F is a full featured listening turntable with convenient automatic operation, built-in preamp and upgradable cartridge. With the automatic play function, push play and the tonearm automatically moves and will play the entire side of a record and then gently return to the arm rest when finished. If you want to stop a record early, there's also a stop button which also brings the tonearm back to resting. Anyone who has ever left about a record playing and returned to the turntable with the needle scraping over label will certainly benefit from this feature. The switchable (on-off) built-in preamp allows the turntable to be plugged into any amplifier, not just amps with specific phono input, making the DP-300F a very versatile turntable that can work with almost any home listening system.

The DP-300F also features a removable cartridge (something that similar-priced audiophile turntables lack) allowing you to upgrade to the cartridge of your choice, however the included MM Cartridge sounds great right out of the box. Other features include switchable 33/45 RPM play at the push of a button (another convenient feature audiophile turntables often lack), die-cast aluminum, vibration-reducing base, and refined gloss finish. Due to the nature of belt drive turntables, the DP-300F is recommended for listening to vinyl, not DJing.

### MAIN FEATURES - DP-300F

#### Sophisticated appearance design

**A cabinet made of thick-walled material with a wall thickness of 4 mm analyzed for strength and density is finished with a beautiful glossy coating**

#### Full-fledged full auto player

**If you select a record size of 30 cm, 17 cm, the arm moves automatically by easy operation, the record is played back, and the arm returns after the play is complete It is a full auto system.**

#### Straight Tone Arm

**It adopts a straight tone arm and draws out the performance of a cartridge with excellent trace capability.**

#### Aluminum die-casting turntable

**Adopted aluminum die casting turntable. It achieves stable rotation with high inertial mass.**

#### Built-in PHONO equalizer

**Because it has a built-in PHONO equalizer, it is also possible to connect directly to mini-component and mini-component amplifier without PHONO terminal.**

#### Manual arm lifter equipment

**Equipped with an arm lifter that is easy to operate manually.**

#### High quality MM cartridge included
