BEYERDYNAMIC DT 1350 80 ohms

The

Beyerdynamic DT1350 Headphones are closed supraaural headphones, designed for control and monitoring applications, musicians and DJ's.

In a marked departure from traditional Beyerdynamic headphone design, the striking aesthetics of the new DT 1350 make it stand out from the crowd, delivering a professional, timeless quality that is both attractive and rugged.

A combination of highly efficient ambient noise reduction and an impressive maximum sound pressure level (129 dB) make the DT 1350 an ideal compact over-ear headphone for audio engineers, musicians and DJ's. Regardless of whether you are a sound engineer monitoring PA systems, a live musician or a DJ, the DT 1350 delivers every time.

The Tesla drivers offer an enormous degree of efficiency with extremely low levels of distortion, allowing the DT 1350 to produce a perfectly balanced, analytical sound even at the highest volumes. The removable ear cushions, combined with a flexible split headband design ensure the headphones sit securely and remain comfortable even during prolonged periods of use. The swivelling ear cups (90-) also allow single-ear monitoring.

Features

Supraaural, lightweight and robust design
Excellent ambient noise attenuation
90 degree swivelling earcups
Soft-skin earpads and headband for good wearer comfort

Tesla Technology with highest efficiency
Flexible split headband
Single-sided cable
Carry bag included

Specifications

Weight: 174
Impedance: 80
Sensitivity: 109
Cord Type: Straight connecting cable, single sided

Frequency Range: 5-30000Hz
Driver Type: Tesla
Maximum Input: 100

Accessories: Carrying case
