With its 2×100 Watt amps and its extremely well balanced frequency response, the Type 07 monitor sounds much bigger and more mature than its moderate size and sleek design make it appear. It is precisely for this reason that there is hardly a field of audio production, which the Type 07 is not ideally suited for: its clever design makes it an especially good player in broadcasting contexts as well as in recording and mix-down studios.

Our Type 07 studio monitor comes, like all models of our Series ONE, with XLR and RCA connections. In addition, it also features an empty slot that allows for a wider range of digital functionality. At the moment, we offer [HEDD Bridge](#) modules that can read and respond to Dante, Ravenna Network / AES67 and AES3/EBU.
