

M-AUDIO MicroTrack 10dB Pad

M-AUDIO MicroTrack 10dB Pad

Šifra: 4263

Kategorija proizvoda: Snimači/Rekorderi

Proizvođač: M-AUDIO

Cena: **2.497,00** rsd

The MicroTrack 10dB Pad is a specially designed attenuator for the 1/8" microphone input on the MicroTrack—or any device with similar output impedance and phantom power characteristics. It reduces the output of a connected electret condenser microphone by approximately 10dB, which protects the input stage of the MicroTrack from becoming overloaded and distorting when recording high-SPL sources. The in-line pad attenuates the audio signal from the mic while passing unaltered the 5V supply needed to power the internal preamp of electret condenser microphones.

M-Audio MicroTrack 10dB Pad Features:

Passive -10dB attenuator - reduces chances of overloading MicroTrack 24/96 input

5V pass-through - works with phantom-powered electret condenser mics

1/8" TRS connector
