

NAIM NAC N 272

Šifra: 10208
Kategorija proizvoda: Pretpojačala
Proizvođač: Naim

Cena: 395.880,00 rsd

Features

UPnP-enabled to allow streaming of audio files at up to 24bit/192kHz resolution from [Naim hard disk servers](#), network-attached storage (NAS) devices or any home computer

Supports a broad range of music formats: WAV, FLAC, Apple Lossless, AIFF, AAC, DSF64 and DFF64, Windows Media-formatted files, Ogg Vorbis and MP3

Spotify Connect built-in to stream millions of songs from the world's most popular streaming service

Optional DAB+/DAB/FM radio module
Multiroom & Party Mode compatible

High quality preamplifier including digitally controlled analogue volume control

Performance upgradable with XP5 XS, XPS or 555 PS power supply

Six 24bit/192kHz-capable digital inputs (S/PDIF) to support optimum connection to external sources

Bluetooth connectivity with aptX audio codec
vTuner 5* full-service internet radio
Naim app for iOS and Android

Hand-built in Salisbury England

All analogue input sockets on the 272 are individually hand wired to the main board to enhance mechanical decoupling. The board itself is mounted on a system of shoulder bolts which releases any tension which can adversely affect sound quality. The sound critical resistors used arrive at Naim matched to within 5%. This already high tolerance is improved before assembly by hand-matching to within margin of just 1%. We then go even further by introducing a slight mechanically compliant bend in the legs of each one during assembly. We take this care and attention because we know it can help to make the difference in producing the incredible sound on which we've built our reputation.

Hybrid Volume Control & Class-A Headphone Amp

The 272 volume control is derived from the design of the flagship Statement NAC S1 control. It offers smooth operation and perfect level matching while a Class-A single-ended headphone amplifier makes the most of high-performance headphones. As soon as headphones are plugged in, the output current drive is automatically turned up five times to give dynamic drive for all headphone impedances

Technology & Craft Analogue Preamplifier

The NAC-N 272 is a high-performance Naim preamplifier with quality hand-matched analogue components selected after listening tests. Great care has been taken to protect the signal path from sources of interference. The digital and analogue sections of the product communicate using optical isolation chips which minimises the impact of the noisy digital circuitry and power supply on the critical audio components.

Digital Technology

The 272's digital pedigree is formidable. It shares the incredibly powerful DSP (Digital Signal Processor) used by the reference NDS network player and features Naim's proprietary digital audio buffering and filtering techniques. This helps to eliminate jitter and optimises the audio stream for the best musical performance from any digital source. It also means that the 272 can play back DSD64 files.
