Cena: **41.880,00** rsd

Groundbreaking music production system for tactile, creative beatmaking.

MASCHINE MK2 is the second edition of Native Instruments' highly respected groove production system and it comes stacked with numerous enhanced workflow improvements for an even more intuitive experience and faster performance. MASCHINE lets you effortlessly produce beats, melodies, and harmonies with powerful drum synths, premium sounds, an integrated sampler, and more – cutting-edge software meets intuitive hardware for ultra-smooth workflow.

MASCHINE's multi-color pads provide ultimate feel in the thick of the beat. Dedicated group buttons and a master push encoder deliver hands-on control of sounds and key parameters. And eight display knobs automatically map to key instrument parameters for on-the-fly, two-handed tweaking and sound shaping. The included MASCHINE 2 software is exploding with cutting-edge technology. Improved browsing, arranging, and sampling, plus a new mixer, plug-in strip, and exclusive drum synths. Get ready for the most responsive, fluid, and musical beatmaking experience ever.

Scales and Chords

MASCHINE 2 extends Keyboard Mode with a new scale and chord engine – fully integrated into the MASCHINE workflow. Simply select your scale and start playing melodies on MASCHINE's 16 ultra-sensitive pads that are always in key. Engage Chord Mode and play chords directly into your compositions.

Arpeggiator

MASCHINE 2 extends Note Repeat into a fully functional arpeggiator. Play any number of notes and let MASCHINE turn them into a melodic pattern. Use the arpeggiator in combination with Scale and Chord Modes and get polyphonic performances from just one key – always in tune. What's more, the output of the arpeggiator is recorded into the Pattern Editor – perfect for post-performance editing.

Keyboard Integration

MASCHINE 2 gives you full keyboard functionality within the MASCHINE environment. Press browse on your KOMPLETE KONTROL keyboard and the KOMPLETE Browser pops up on your computer screen, letting you select and load a sound directly into a sound slot in MASCHINE. Watch scales, chords, and arpeggios light up across KOMPLETE KONTROL's Light Guide™, see the color of your sounds in MASCHINE directly on the keyboards, and get perfectly mapped parameters instantly with Native Map™.

Introducing Native Kontrol Standard®

KOMPLETE KONTROL continues its evolution with Native Kontrol Standard® (NKS). NKS is Native Instruments' extended plug-in format that opens up the KOMPLETE KONTROL system.

It allows VST and KONTAKT instrument developers to integrate their plug-ins with KOMPLETE KONTROL and MASCHINE at the same deep level as KOMPLETE Instruments. This means that even instruments not built by NI can be fully integrated in the KOMPLETE KONTROL and MASCHINE browsers, with instrument

parameters intelligently mapped straight out of the box. NKS instruments can access the Light Guide, Smart Play features, and the full creative potential of KOMplete KONTROL. And what's more, the NKS version of an instrument will be a free update for existing owners.

FEATURES

Industry-standard groove box workflow

Sampler, arranger, mixer, effects, and more

16 highly sensitive, multi-color performance pads

Two high-contrast displays with 64x256 resolution

Eight display knobs to tweak parameters and browse presets

Browse, scrub, and adjust tempo, volume, and more with intuitive push encoder

23 high-quality effects for instant sound enhancement

Step sequencing, real-time recording, note repeat, slicing, and auto-mapping

Extensive MIDI-mapping capabilities to control other hardware and software

Easy-to-use browser with tagging of kits, instruments, samples, and effects

Intuitive automation recording and step automation editing
