# PRO-JECT Phono Box USB DC Black

Šifra: 12951  
 Kategorija proizvoda: Gramofonska Pretpojačala  
 Proizvođač: Pro-Ject

Cena: **16.680,00** rsd

## Perfect for amps without a phonostage

Many top quality amps come without a phonostage built-in, meaning you can't connect most turntables without a separate box. The Phono Box USB DC makes the ideal choice, as it's compatible with a huge range of turntable cartridges, including MM (Moving Magnet) and MC (Moving Coil). This means that, as you improve the quality of your turntable, the Phono Box adapts to suit.

## A boost in quality for those that do

Even if your amp does have a built-in phono stage, this one is likely to sound much better. Featuring a dedicated DC power supply, short signal paths and high quality components, the Phono Box USB DC has a much higher spec than most built-in phono stages. This attention to detail means that you'll hear more detail, less noise and a wider dynamic range.

## USB output to PC or Mac

As a further bonus, this version of the Phono Box comes with a USB output. Compatible with Windows, MacOS and Linux, simply connect to you home computer and playback or record your vinyl digitally. Both USB and analogue outputs may be used simultaneously, for playback while recording.

Enhance your vinyl playback quality, with the Project Phono Box USB DC.
