CUSTOMISABLE EQ SECTION

The EQ section of the RMX-60 Digital is customisable, allowing users to switch between Classic and Isolator mode to suit individual mixing styles. Underneath the full three-band EQ on each channel, there is also a dedicated bi-polar filter pot that allows for creative mixing with High and Low-band filter curves.

SOPHISTICATED FX LAYOUT

The RMX-60 Digital boasts a sophisticated FX layout, inspired by the flagship RMX-80 Digital mixer. There are eight studio quality effects built into the unit (Delay, Echo, Reverb, Gate, Pitch Shift, Phase, Bit Crusher and Noise) that are adjustable to suit your desired sound and elevate your performance to another level. FX manipulation is made even easier by the clear LCD display, which gives you a convenient visual feedback of Beat and Time parameter positions. The flexible routing allows the FX section to be sent to

individual channels, the microphone input, or to the master output. The BPM shift function allows for even more creativity by allowing for beat-accurate edits of Delay or Reverb effects.

LARGE PARAMETER DISPLAY

The LCD display is not only helpful when using effects, as it also acts as a reliable beat-matching tool. The double BPM Counter allows for the BPM of different sources to be checked so you can cue accurately and in time.

ADJUSTABLE LINE- AND CROSSFADER CURVES

To suit different mixing and scratching styles the RMX-60 Digital's line- and crossfader-curves are adjustable, and there's also a linefader start function. The crossfader is freely assignable between all channels, and the stock fader can also be switched for the new RMX Innofader by Audio Innovate, which is specifically designed for Reloop mixers to offer a gentle, gliding performance.

ACTIVE DUCKING TECHNOLOGY

The RMX-60 Digital is a true all-round club mixer. Neat finishing touches such as the "Active Ducking Technology" for the mic channel, and the future-proof firmware system that can be retro-updated by connecting to a computer, elevate this to a mixer that can support any type of DJ for years to come.
