Allen and Heath Xone 23C DJ Mixer at a Glance:

4 Stereo Channel USB Soundcard

VCF Filter System

Tonal sculpting with the 3-band total kill EQ

4 Stereo Channel USB Soundcard

The Allen and Heath Xone 23C DJ mixer is an upgrade to their well-respected Xone 23 model. The 23C offers you a premium quality, 4 stereo channel 96kHz 24bit internal soundcard not available on the previous version. This soundcard offers you replaying and recording from your chosen DJ software. Allen and Heath is also including a copy of Mixvibe's Cross LE software to get you up and running quickly. Being the centerpiece of the Xone 23C, this 4 stereo-channel soundcard gives you everything you love about a digital set up, with hands-on control.

VCF Filter System

The Xone 23C also boasts Allen and Heath's renowned analog Voltage Control Filter (VCF) system. The lowpass and highpass filters, frequency sweep, and 'mild to wild' resonance control give you precise control, taking your mixes into sonic territory only confined by your imagination. And there is also an effects loop to connect your favorite effects units, routing right back in through the filter system. These are high-end features on a mixer for a great price.

Tonal sculpting with the 3-band total kill EQ

On both channels of your Allen and Heath Xone 23C you'll find a 3-band EQ isolator. This "Total Kill" EQ allows you enough frequency control to completely eliminate your chosen frequency band and bring it back into the mix with ease. Combine that with the VCF filter system and you have the power to really fine-tune your performance all night from your fingertips on the Xone 23C.

Allen and Heath Xone 23C DJ Mixer Features:

High-performance DJ mixer with internal soundcard
